

**“Admission Management System”**

# INTRODUCTION

## CHAPTER

01

**KARMAYOGI**

## **CHAPTER.1**

### **INTRODUCTION**

The Admission Management System enables the student to fill application forms online and submit it. They also submit their necessary documents like passport size photograph, certificates and mark sheets along with the identity proof. The admin can view the application forms and can approve or disapprove them. He can submit the marks of the students. If it is approved, an email will be sent to the student's email ID and the admit card can be downloaded from the student's account. The students can further view their results. This system helps in reducing the manual efforts and consumes less time.

Today all the work related to the admission is done manually by ink and paper, which is very slow and consuming much efforts and time. The main principle behind the need of college admission management system is easy supervision of the institutes. It can handle the details of students such as personal details or admission details. The student database has been designed taking into account the practical level as well as user level. The main aim of our project is to develop the application which will be useful in college admission process. This college admission system project includes the admission process of student, starting from when the student takes admission in the college in first year to the submission of examination form. Student admissions are a vital part of any college's existence because students are what keep a college. The student admission is one of the most important activities within a college as one cannot survive without students. A poor admission system can mean fewer students being admitted into a college because of mistakes or an overly slow response time.

The process begins with a potential student completing an application form through the Universities and Colleges Admissions Service. The first step for students is to apply directly to the college through a customized online form. The next step is for the Admissions service center is to review the application and ensure that all of the required information has been provided. The application in its entirety is then forwarded, complete with a recommendation, to the respective department's Admissions Tutor, who has the final say as to whether each potential student is accepted or rejected. Before making a decision, the Admissions Tutor reviews the application and the additional documentation, comparing the academic credentials to a list of college rankings and previous similar applications.

**“Admission Management System”**

# LITERATURE SURVEY

## CHAPTER

02

**KARMAYOGI**

## **CHAPTER NO.2**

### **LITERATURE SURVEY**

Admission benefits the students and the administration in achieving its communication gap. The gap between them will be reduced with the help of online admission. It reduces the work for pen and paper and it will bring in great comfort for the students who apply for the college admission. Instead of standing in line to collect application and submit the filled form, it's easy for the students to submit all the documents along with the filled application form online. Mwapas hua H. Fujo and Mussa Ally Dida paper entitled “Web-based admission system for advanced level private schools”. This paper looks into the challenges faced by the students and the administration during time of admission. This paper concludes that 93% of schools are undergoing the admission process through pen and paper manually [1].

Global systems for mobile communication are considered as the reliable and efficient technology for most of the technological devices. GSM used is to know the information about the student whereabouts and his activities completely. The RF-ID is used to integrate the parts of the student in order to track the student there itself [2].

Admission Management System aims to provide an interface to maintain student information. Educational institutes or colleges can use this system to maintain information of students. The student information system maintains all kind of details regarding students, college, course, batch, placements, academic progress report and other resource related details too. Student details can be tracked from day one to last day which can be useful to maintain records [3].

# SCOPE OF PROJECT

“Admission Management System”

## CHAPTER

03

KARMAYOGI

## CHAPTER NO.3

### SCOPE OF THE PROJECT

#### 3.1 Importance of Project

- **Efficiency and Automation:** Admission management system streamline the entire admission process, from application submission to decision-making. By automating tasks such as data entry, form validation, and document management, institutions can save time and resources while ensuring accuracy and consistency.
- **Enhanced User Experience:** Prospective students and applicants benefit from a more user-friendly and convenient application process. Online application submission, document uploads, and real-time application status tracking improve the overall experience, making it easier for students to apply to the institution.
- **Data Centralization and Security:** Centralizing student and application data within a secure system enhances data integrity and security. Institutions can maintain comprehensive records of applicants, streamline data retrieval, and ensure compliance with data protection regulations.
- **Improved Decision Making:** Admission management systems provide valuable insights into applicant demographics, trends, and performance metrics. Admissions committees can analyse data to make informed decisions regarding admission criteria, enrolment targets, and program offerings; thereby optimizing the admissions process.
- **Scalability and Adaptability:** As institutions grow or adapt their admissions processes, admission management systems can scale to accommodate increased application volumes, new programs or changing requirements. Modular architectures allow for flexibility and customization to meet the evolving needs of the institution.
- **Competitive Advantage:** A well-implemented admission management system can serve as a competitive differentiator for institutions. A streamlined and efficient admissions process can attract more qualified applicants, enhances the institution's reputation, and contributes to overall enrolment growth.
- **Integration with Other Systems:** Admission management systems can integrate with other institutional systems, such as student information systems, financial aid systems, and learning management systems. Seamless integration facilitates data exchange, reduces manual data entry, and enhances operational efficiency across the institution.
- **Compliance and Reporting:** Admission management systems help institutions maintain compliance with regulatory requirements and accreditation standards.

### 3.2 Objective of the Project

- **Student Information Management:** The system should be able to capture, store, and manage student information including personal details, academic records, contact information, etc.
- **Application Management:** It should facilitate the online submission of admission applications by prospective students. This involves creating forms, validating data, and storing application submissions securely.
- **Document Management:** The system should handle the collection and management of documents required for admission, such as transcripts, recommendation letters, certificates, etc. It may also involve document verification and validation processes.
- **Application Processing:** The system should support the processing of admission applications, including reviewing applications, assigning application IDs, tracking application status, and communicating with applicants regarding the status of their applications.
- **Admission Decision Making:** The system should facilitate the decision-making process by admissions committees or authorities. This may involve ranking applicants, setting admission criteria, and generating admission offers or rejections based on predefined rules.

### 3.3 Problem Statement

- **Manual Data Entry and Handling:** Many institutions still rely on manual paperwork and data entry, leading to errors, inefficiency, and time-consuming processes.
  - **Application Overload:** During admission periods, institutions often receive a high volume of applications, making it challenging to manage and process them efficiently.
  - **Communication Challenges:** Keeping applicants and their parents informed about admission status, requirements, and deadlines can be challenging without an organized communication system.
-

- **Resource Allocation:** Proper allocation of resources, such as classrooms, instructors, and materials, is crucial for admitting the right number of students without overburdening the institution.
- **Selection Criteria:** Determining fair and transparent admission criteria that align with the institution’s goals and values can be a complex task.
- **Payment Processing:** Handling application fees and tuition payments securely and efficiently can be a significant challenge.
- **Mobile Compatibility:** As more people use mobile devices, the system should be mobile-friendly or offer a dedicated mobile application.
- **Emergency Procedures:** Having contingency plans for emergencies that may disrupt the admission process, such as natural disasters or cybersecurity incidents.

**“Admission Management System”**

# METHODOLOGY

## CHAPTER

**04**

**KARMAYOGI**

## **CHAPTER.4**

### **METHODOLOGY**

#### **4.1 Proposed Methodology:**

- User can login and view the college details and list of various streams. They can also apply to the respective college and get notification if they are selected.
- Basically, this online admission system allows new students to apply for taking admission in the institute.
- Student can fill admission form from different locations. Admin can take appropriate action on all the admission request, also can approve the pending application. Admin is approval students are provided a login ID and password. Then student can receive login ID and password. They can view their status of marks obtained in various semester from time to time.
- There are two modules in this system namely admin and student. Admin can add college details and cut off list they can select student, register and remove student.

#### **Agile Methodology**

The Agile Method is incremental development method in which the increments are small, and, typically, new releases of the system are created and made available to customers every two or three weeks. This approach to software development interleaves program specification, design, and implementation. The involvement of clients greatly benefits the development process since they give rapid feedback on what to change or add in the next increment or sprint meeting. Developing an Admission Management System using the Agile Model involves breaking down the project into smaller, manageable tasks and iterations, and prioritizing features and functionalities based on their importance and customer feedback.

#### **4.2 Block Diagrams:**

##### **4.2.1 DFD Level zero**

***Fig 4.2.1 Data Flow Diagram Level 0***

**Student:** Represents individuals who are potential applicants to the educational institution. Students interact with the admission system by submitting application forms, documents, and other necessary information.

**Admission Process:** This process encompasses all the activities related to managing the admissions. It includes receiving and processing applications, reviewing documents, evaluating applicants based on predefined criteria, making admission decisions, and communicating these decisions to the applicants.

**Admitted:** This process signifies the stage where applicants are accepted into the institution after successfully completing the admission process. It may involve additional steps such as enrolment, orientation, or other onboarding activities.

**Admission:** This process represents the entire admission lifecycle, from the initial submission of applications to the final admission decision. It encompasses all the sub-processes involved in managing admissions.

# DESIGN, WORKING AND PROCESSES

“Admission Management System”

## CHAPTER

05

KARMAYOGI

## **CHAPTER.5**

### **DESIGN, WORKING AND PROCESSES**

#### **5.1 Chapter Overview**

This chapter we are going to have an overview about how much time does it take to complete each task like- Introduction and Problem Statement, Literature Survey, Project Statement, Software Requirement and specification, System Design, Partial Report Submission, Architecture Design, Implementation, Deployment, Testing, Publish Paper, Report Submission, etc. This chapter also gives focuses on stakeholder list which gives information about project type, customer of the proposed system, user and project member who developed the system.

#### **5.2 Implementation Environment**

##### **HARDWARE REQUIREMENTS:**

- Minimum RAM: - 4GB
- Hard Disk: - 256GB
- Processor: -Intel Pentium 4(1.50 GHZ) or above

##### **SOFTWARE REQUIREMENTS:**

- Back-end connectivity: XAMMP server
- Back-end: PHP, MySQL database
- VS Code
- Browser

#### **5.3 Technologies**

- To design main system PHP language is used.
  - HTML is used to make the interface and CSS is used to design user interface to make the system more user friendly.
-

## **5.4 Open-source Frameworks**

### **5.4.1 XAMPP**

XAMPP is freely available open-source cross-platform web solution package which was developed by Apache Friends. It contains Apache HTTP Server, Maria DB database, PHP, and Perl. XAMPP works equally well on Windows, Linux and Mac operating systems. To develop databases used MySQL which was built in XAMPP bundle.

### **5.4.2 MySQL**

MySQL is a relational database management system. The database structure is organized into physical files optimized for speed. The logical data model, with objects such as data tables, views, rows, and columns, offers a flexible programming environment. MySQL's connectivity, speed, and security make it highly suited for accessing databases on the internet. Ease of use: Developers can install MySQL in minutes, and the database is easy to manage. Reliability: MySQL is one of the most mature and widely used databases.

## User Login

## User Register

When user want to see student filled data

Select Year

When select First Year then display First year student data

User can update this data

## 6.2 Advantages

- No need of queue at admission office.
- No need to go varsity to buy the admission form.
- No need to go bank to pay admission fee.
- No need of question-and-answer paper for admission test.
- No need to go varsity for admission test.
- No need of waiting to calculate the admission test result.
- No need of high-speed internet for admission test.
- No need of any Examination room for admission test.

### 6.3 Disadvantages

- Require much man power i.e. much efforts, much cost and hard to operate and maintain.
- Since, all the work is done in papers so it is very hard to locate a particular student's record when it is required.

### 6.4 Applications

- **Online Application Portal:** To provide a user-friendly online portal for prospective students to submit their applications. This portal should capture personal information, academic records, extracurricular activities, essays, and other relevant documents.
- **Document Management:** To store and manage application documents, such as transcripts, recommendation letters, and essays, in a secure and organized manner.
- **Application Tracking:** To enable applicants to track the status of their application throughout the admission process, from submission to decision.
- **Admission Criteria Evaluation:** To assist admission committees in evaluating applicants based on predetermined criteria. The system should allow for the customization of these criteria to suit the college's specific requirements.
- **Application Fee Processing:** To handle application fees securely, providing multiple payment options, and generate receipts for applicants.
- **Communication:** To send automated updates and notifications to applicants regarding their application status, interview schedules, and additional document requests.

# CONCLUSION AND FUTURE SCOPE

“Admission Management System”

## CHAPTER

07

KARMAYOGI

## CHAPTER NO.7

### CONCLUSION AND FUTURE SCOPE

#### 7.1 Conclusion

In this way, we are going to develop Admission Management System, which minimize the time required for the manual admission process system. Records of the students can be produced easily in a short span of time. Workflow of the process will lead to efficiency and will be user friendly. Our system primarily focuses on building an efficient and user-friendly communication system for the educational institutions.

#### 7.2 Future Scope

- **Artificial Intelligence (AI) and Machine Learning:** AI can be used for predictive analytics to identify prospective students who are a good fit for the institution based on past admission data. Machine learning algorithms can also help to automate application screening and evaluation.
- **Blockchain for Credential Verification:** The use of blockchain technology can enhance the security and authenticity of academic and personal credentials, making it easier for colleges to verify the accuracy of applicant information.
- **Enhanced Data Analytics:** More sophisticated data analytics tools can provide deeper insights into applicant trends, helping colleges make informed decisions about their admission criteria and yield rates.
- **Virtual Reality (VR) Campus Tours:** Offering immersive virtual campus tours can give applicants a better feel for the college, potentially increasing the likelihood of their application.
